

Scale Stopper No-Salt Conditioners

No Salt, Power, or Wastewater.

Clean Water Made Easy

www.cleanwaterstore.com

ELIMINATE SCALE IN PIPES AND FIXTURES WITHOUT THE SALT.

Introduction

For years, water softeners have been virtually the only means of treating hard water. Other alternatives including magnets, electromagnets, RF devices and catalysts have been available but few have proven to be effective.

Technology Breakthrough

A recent development, Template Assisted Crystallization (TAC) has produced the first effective chemical-free scale prevention method. Based on TAC technology, Scale Stopper converts hardness minerals into harmless, inactive microscopic crystals.

Tested and Proven

Tested by an independent laboratory against the international protocol for scale prevention, Scale Stopper achieved a 99.6% effectiveness rating - the only technology to do so and far more effective than any other water softener alternative. Proven in over 7 years of successful use in homes and businesses.

Benefits

- Complete protection from scale for boilers, water heaters and more.
- No salt, chemicals or electricity required.
- No backwash water waste.
- Long lasting media-not consumed by the reactions.
- Environmentally friendly-great fit for corporate.
- Green programs or initiatives.

Atomic sized nucleation sites on the surface of small polymer beads convert dissolved hardness into microscopic crystals.

Once the crystals grow to a certain size they are released from the bead. The crystals in solution keep the hardness out of the water so that it can't form scale or interfere with soap.

Scale Stopper Models

PART #	Media Size	Size	Max Flow Rate
B5000970	3 Liter	8" x 51"	12 GPM
B5000190	4 Liter	9" x 55"	16 GPM
B5000200	5 Liter	10" x 61"	20 GPM
B5000240	7.5 Liter	12" x 59"	30 GPM

Which size is best? For homes with 1 to 2.5 bathrooms and 2 to 4 persons, the 3 Liter works good. For larger home use the 4 or 5 liter model.

How much hardness does this system remove?

None. The Scale Stopper does not remove hardness from water. It changes the structure of the calcium so no scale forms in your pipes. You will still see white deposits on glass doors and fixtures when the water evaporates.

If you have very hard water (over 12 grains per gallon) and you currently have a water softener and want the same soft water effects, we recommend you do not purchase a no-salt conditioner. NOTE: this does not matter what the make or brand is or what claims are made.

How long does the Scale Stop media last?

Change every 4 to 5 years for most applications. It is easy to dump out and change the scale stop media.

What maintenance is required? None.
